

seepex rotating unit package offers assembly options to save you time and money

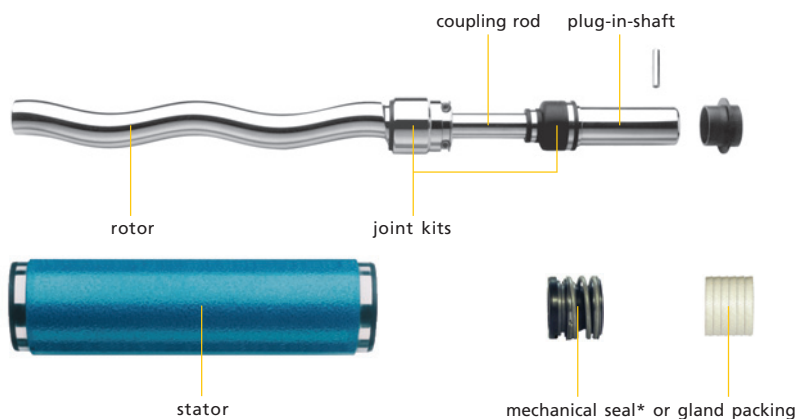

The seepex 'Rotating Unit' offers our pump customers spare parts with an added advantage - the entire rotating element can arrive either fully assembled or in kit form.

Supplying spares in this way brings you reduced OPEX and least whole life costs:

- Saves on site assembly and installation time
- Brings full seepex assembly warranty
- The new rotating unit returns the pump to its original efficiency as all wearing parts are renewed
- Construction to the original pump specification ensures compatibility with pumped media
- Less cost than procuring individual components and reduces purchase frequency

What do you get when you order an original seepex rotating unit?

All rotating parts required for a refurbishment as shown below:

** does not include cartridge seal, please contact seepex aftersales for details*

Delivered to your exact requirements for ease of installation

For your flexibility, you can order your rotating unit in three ways. We appreciate that on larger pumps the complete unit can be bulky, so we offer at no extra cost delivery of these units fully assembled, partially assembled or even in loose kit form. Simply state how you would like to receive the unit on placing your order.

So...the next time you need spares for your seepex pump, why not request a price for a complete 'Rotating Unit' and discover the advantages they offer whilst saving time and money?
